2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

This document was prepared by Stantec Consulting Services Inc. ("Stantec") for Intermountain Power Service Corporation (the "Client"). The conclusions in this Report are Stantec's professional opinion, as of the time of the Report, and concerning the scope described in the Report. The opinions in the document are based on conditions and information existing at the time the scope of work was conducted and do not take into account any subsequent changes. The Report relates solely to the specific project for which Stantec was retained and the stated purpose for which the Report was prepared. The Report is not to be used or relied on for any variation or extension of the project, or for any other project or purpose, and any unauthorized use or reliance is at the recipient's own risk.

Stantec has assumed all information received from the Client and third parties in the preparation of the Report to be correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein.

This Report is intended solely for use by the Client in accordance with Stantec's contract with the Client. While the Report may be provided by the Client to applicable authorities having jurisdiction and to other third parties in connection with the project, Stantec disclaims any legal duty based upon warranty, reliance or any other theory to any third party, and will not be liable to such third party for any damages or losses of any kind that may result.

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

EXECUTIVE SUMMARY

January 18, 2024

1.0 EXECUTIVE SUMMARY

1.1 PURPOSE OF THIS REPORT

On behalf of Intermountain Power Service Corporation ("IPSC"), Stantec Consulting Services Inc. ("Stantec") has prepared this report to summarize IPSC's 2023 groundwater monitoring and recovery program pursuant to the United States Environmental Protection Agency's ("US EPA") Hazardous and Solid Waste Management System; Disposal of Coal Combustion Residuals (CCR) from Electric Utilities, 40 CFR 257 Subpart D (the "Federal CCR Rule") (and the corresponding Utah CCR Rule at Utah Administrative Code R315-319 (the "State CCR Rule") (collectively, the "CCR Rules")) at IPSC's Intermountain Generating Facility ("IGF") located approximately ten miles north of Delta, Millard County, Utah. IPSC's compliance program addresses elements prescribed by CCR Rule Parts §257.90 (R315-319-90) Applicability; §257.91 (R315-319-91) Groundwater Monitoring Systems; §257.93 (R315-319-93) Groundwater Sampling and Analysis Requirements; §257.95 (R315-319-95) Assessment Monitoring Program; and §257.96 (R315-319-96) Assessment of Corrective Measures.

IPSC historical reports presented IPSC's approach for addressing requirements specified by the CCR Rules as well as the facility's Utah Department of Environmental Quality ("UDEQ"), Division of Water Quality ("DWQ") Groundwater Discharge Permit No. UGW270004. The UDEQ Division of Waste Management and Radiation Control ("DWMRC") also has regulatory oversight pursuant to the State CCR Rule, under which DWMRC issued a separate permit on November 23, 2020 for the CCR Units, Permit No. 1601. The CCR Rules apply to each of IPSC's three (3) CCR units (reference Figures 1 and 2 for regional and site-specific, location maps):

- Combustion By-Products Landfill ("CB Landfill"),
- Bottom Ash Basin [surface impoundment underlain by 80-mil High Density Polyethylene (HDPE) liner], and
- Waste Water Basin (surface impoundment underlain by 80-mil HDPE liner).

This annual summary report is formatted in general accordance with reporting requirements prescribed within §257.90(e) (R315-319-90(e)). The report provides an overview of groundwater monitoring and recovery activities conducted at the site during 2023 and ongoing activities designed to further assess and design corrective measures specified by IPSC's Groundwater Discharge Permit and the CCR Rules, as outlined in detail within IPSC's June 2021 *Selection of Remedy Report*.

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

EXECUTIVE SUMMARY

January 18, 2024

1.2 BACKGROUND

The DWQ has regulatory oversight for IPSC's compliance with its Groundwater Discharge Permit, which prescribes operation, monitoring, maintenance, and corrective measure protocols for the Bottom Ash Basin, the Waste Water Basin, and several non-CCR regulated evaporation basins. As detailed in historical reports, the DWQ and IPSC agreed that IPSC would implement a phased groundwater investigation and recovery program that focused initially on removal of Total Dissolved Solids (TDS)-impacted groundwater located downgradient of, and in relatively-close proximity to, apparent historical release areas at the Bottom Ash Basin. Figures 1 and 2 identify regional and site-specific location maps.

IPSC's DWQ-permitted Groundwater Protection Level for TDS is 1,100 milligrams per liter (mg/L; i.e. parts per million-ppm) at all Groundwater Discharge Permit Compliance Wells, except Compliance Well EMW-3 which has a TDS protection level of 1,219 ppm and is located west of seven new evaporation ponds that are currently under construction, as depicted on Figures 3 and 4. IPSC anticipates that the seven new ponds will become operational sometime prior to the IGF's 2025 conversion from coal to natural gas and hydrogen. Groundwater recovery wells WR-101, WR-102, and WR-103 have been used since 2010 for recovery of TDS-impacted groundwater as part of IPSC's Groundwater Discharge Permit compliance program.

The DWQ and IPSC agreed that additional groundwater monitoring wells, including sampling and pump-testing of wells associated with CCR Rule compliance, would be installed to help delineate more precisely the location and hydraulic characteristics of the downgradient leading edge of the TDS plume located southwest of the Bottom Ash Basin. Following delineation of the downgradient leading edge of the TDS plume, then IPSC would evaluate how best to control the downgradient migration of the plume, remediate the plume to permit standards, and ensure ongoing protection to human health and the environment.

Once IPSC's groundwater quality monitoring program expanded under its CCR permit, IPSC identified that TDS had also impacted groundwater quality downgradient of the Waste Water Basin. Historically, since monitoring of water quality began at the IGF, TDS was found to have migrated farther downgradient of the Bottom Ash Basin and Wastewater Basin than any other Groundwater Discharge Permit or CCR water quality analyte, including boron and CCR Appendix IV metals.

Thus, TDS was used as the leading indicator constituent of impacted groundwater quality for fashioning a more expansive groundwater remediation program. No supplemental wells were deemed necessary downgradient of the Combustion By-Products Landfill, as all CCR constituent concentrations quantified to date represent typical background concentrations.

During 2020, as part of its corrective measure assessment, IPSC installed 25 supplemental wells to more definitively delineate the leading edges of TDS plumes located downgradient (southwest) of the Bottom Ash Basin and the Waste Water Basin. Several of the wells were pump-tested to investigate localized hydraulic characteristics. To date, IPSC has installed several dozen

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

EXECUTIVE SUMMARY

January 18, 2024

groundwater monitoring wells as part of DWQ and DWMRC regulatory compliance and investigation of the downgradient leading edges of the TDS plumes.

Stantec utilized the 2020 pump-test results and October 2020 groundwater quality data to update its site-specific groundwater fate and transport model. The model was used to help identify which wells might be used for groundwater recovery to help reduce total mass of CCR constituents in groundwater and control the downgradient migration of such constituents.

Final selection and design of the expanded groundwater remedy was documented in IPSC/Stantec's June 2021 *Selection of Remedy Report*. IPSC and Stantec finalized design for planned expansion of IPSC's existing groundwater recovery network by increasing the number of wells being used for groundwater recovery to help reduce total mass of CCR constituents in groundwater in pursuit of achieving Groundwater Protection Standards, control the downgradient migration of such constituents, and provide ongoing protection to human health and the environment.

During 2022 through 2023, IPSC installed groundwater recovery pumps, recovered water conveyance piping, additional electricity capacity, and related equipment associated with the expanded groundwater recovery network. As additional groundwater quality data is generated and evaluated through statistical analysis, IPSC is prepared to further expand and/or enhance the groundwater monitoring and/or remedial approach, if warranted. Currently, the following wells are used for groundwater recovery:

Bottom Ash Basin Plume Control:

- wells: RW-9, BAC-13, BAC-14, BAC-29, BAC-30, and BAC-31 (in addition to wells WR-101, WR-102, WR-103).

Waste Water Basin Plume Control:

- wells: WWC-1, WWC-4, WWC-5, RW-4, WWC-6, WWC-8, WWC-12, WWC-13, WWC-14, and WWC-15.

Prior to 2023, and in accordance with CCR statistical analysis (which requires a minimum of eight sampling events for analysis), Appendix IV metals had either not impacted groundwater quality, or elevated metal concentrations had only been identified in samples from wells located in relatively close proximity to the apparent historical release areas at the CCR unit boundaries.

However, as of Fall 2023, wells BAC-8 through BAC-16 and WWC-9 through WWC-13 had been sampled at least eight times and were therefore included in statistical analyses. As discussed in detail in following section 2.2.3, arsenic was identified as exceeding the acceptable statistical range, and as such will be investigated further. Currently, and for the foreseeable future, the CCR constituent plumes downgradient of the two surface impoundments do not pose any unmitigated risk to human health, ecologic receptors, and/or the environment, however.

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

SPRING AND FALL 2023 MONITORING ACTIVITIES
January 18, 2024

2.0 SPRING AND FALL 2023 MONITORING ACTIVITIES

2.1 MONITORING, PURGING, AND SAMPLING PROTOCOL

During each of the two sampling events conducted respectively during April/May/June (Spring) and October/November (Fall) 2023, all CCR compliance wells were purged and sampled, following measurement of static water levels. All water level monitoring and well purging and sampling activities were performed in accordance with measures outlined within IPSC's November 2015 *Ground Water Sampling and Analysis Plan*, a copy of which is posted on IPSC's public website. Groundwater samples were submitted to Chemtech-Ford Laboratories (CTF), a Utah-certified, analytical laboratory under strict Chain-of-Custody protocol.

Figures 3A, 4A, 3B, and 4B present potentiometric maps based on water level measurements collected at CCR monitoring wells during Spring and Fall 2023, including two-feet (2-ft.) and five-feet (5-ft.) contours, respectively. Regional groundwater potentiometric and apparent flow direction characteristics remain similar to those observed historically. The predominant groundwater flow direction in relatively close proximity to the Bottom Ash Basin and the Waste Water Basin is generally toward the southwest, with a more westerly component of flow due west of the northwestern corner of the Waste Water Basin. Groundwater flow in the vicinity of the CB Landfill is generally from the east toward the west.

As discussed in more detail in following report section 3.0, and as observed during the Spring and Fall monitoring surveys, IPSC's June 2023 initiation of continuous pumping and removal of groundwater from the subsurface at select groundwater recovery wells resulted in localized declines in elevations of the inferred potentiometric surface near the recovery wells. Continuous, ongoing removal of groundwater from the recovery wells will continue to induce such localized declines in potentiometric surface elevations and associated groundwater recovery. Future monitoring of groundwater quality, water levels in monitoring and recovery wells, and inferred potentiometric surface elevations will be used to help gauge the successfulness of IPSC's TDS plume control measures.

Table 1 presents groundwater monitoring well construction details, including well completion dates, diameters, depths, screened intervals, and top of casing elevations (mean sea level-msl). Attachment 1 presents monitoring well drilling logs and schematic diagrams. Attachment 2 includes summaries of historical water level measurements including the Spring and Fall 2023 data.

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

SPRING AND FALL 2023 MONITORING ACTIVITIES
January 18, 2024

2.2 ANALYTICAL RESULTS

2.2.1 TDS Results

Figures 5A and 5B herein identify TDS concentrations quantified during the Spring and Fall 2023 sampling events, superimposed atop the respective Spring and Fall groundwater flow potentiometric maps utilizing 2-ft. contour intervals. As observed in the past, groundwater quality monitoring data at the boundaries and down-gradient of the CB Landfill (wells CL-1 through CL-8 and WDB-19) are deemed representative of Background water quality conditions.

The TDS analytical results associated with monitoring of the two surface impoundments are similar to those observed during past monitoring events. TDS-impacted groundwater has migrated to varying distances generally southwest (downgradient) of the Bottom Ash Basin and the Wastewater Basin, depending on area-specific location. There is also a localized area of elevated TDS concentrations located immediately west of the northwestern-most corner of the Wastewater Basin, where there appears to be a more westerly component of groundwater flow. As detailed in section 3.0, IPSC is recovering TDS-impacted groundwater from multiple recovery wells at strategic locations within the TDS plumes and near the downgradient, leading edges of the TDS plumes in pursuit of TDS plume control.

2.2.2 CCR Appendix IV Results – Exploratory Data Analysis

The initial step of statistical analysis was the exploratory data analysis of CCR Appendix IV analytical results generated at the site to date. The process of the exploratory data analysis utilizes simple summary statistics (e.g., mean, median, standard deviation, and percentiles) and graphical representations to identify important characteristics of an analytical dataset, such as the center of the data (i.e., mean, median), variation, distribution, patterns, presence of outliers, and randomness.

Summary statistics were calculated for each well-constituent pair at each CCR-regulated unit (Tables 2A through 2C). These summary statistics include the following information: frequencies of detection, ranges of reporting limits, minimum/maximum detected concentrations, mean concentrations, standard deviations, medians, 95th percentiles, and information such as total number of available samples, frequency of detection, and maximum detected concentrations for each well-constituent pair. Exploratory data plots for each well-constituent pair (i.e., box plots and time series plots - Attachments 3 and 4, respectively) were also constructed to support a visual review of the data and identify potential outliers.

2.2.3 CCR Appendix IV Results – Comparison of Groundwater Quality Data to Groundwater Protection Standards

Statistical methods consistent with US EPA document "Statistical Analysis of Groundwater Monitoring Data at RCRA Facilities: Unified Guidance" (US EPA 2009; hereafter referred to as the Unified Guidance) were utilized to compare Appendix IV constituent concentrations in groundwater to their respective fixed standards known as the Groundwater Protection

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

SPRING AND FALL 2023 MONITORING ACTIVITIES
January 18, 2024

Standards (GWPS). GWPSs were established for each CCR appendix IV constituent. GWPS are represented as the greater value between the US EPA Maximum Contaminant Level (MCL) or US EPA alternative standards (Cobalt, Lead, Lithium, and Molybdenum) or the Upper Tolerance Limit (UTL) calculated using historical background data collected from wells upgradient of the CCR units. US EPA MCLs, UTLs, and the appropriate GWPSs are presented for each CCR unit in Table 2D.

The Unified Guidance recommends a confidence interval approach for comparing groundwater quality data to a GWPS. If the underlying population is stable (i.e., no trend is present), then the Unified Guidance indicates that comparison to the GWPS can be made based on a static confidence interval around the mean. However, in the presence of a statistically significant trend, the Unified Guidance recommends constructing a confidence band around a trend line. To determine if there is a statistically significant level (SSL) above the GWPS for any Appendix IV constituent, the lower confidence limit/band at the latest sampling event is compared to the GWPS. An SSL is declared only when the entire confidence limit/band is above the GWPS.

Constituent/well pairs with a minimum of eight analytical sampling results are eligible for statistical analysis. Additional constituent/well pairs are added to the statistical analysis when the benchmark of eight analytical samples become available through the ongoing monitoring program. As of 2023, wells BAC-8 through BAC-16 and WWC-9 through WWC-13 were added to the statistical analyses because the wells had been sampled at least eight times.

Following the exploratory data analysis, data from each eligible constituent/well pair were screened to identify if there were detected concentrations greater than or equal to their respective GWPSs. If no detected concentrations exceeded the respective GWPS, the constituent/well pair was not statistically evaluated further. If a detected concentration exceeded the GWPS for any constituent/well pair, then linear regression analysis was completed to identify constituent/well pairs with a statistically significant linear trend ($p < 0.05$). As noted above, if no statistically significant linear trend was detected ($p \geq 0.05$), a static confidence interval around the mean was used for comparison to the GWPS. If a statistically significant linear trend was present ($p < 0.05$), a confidence band around the linear regression trend line at the most recent evaluated sampling event was used for comparison to the GWPS. In both cases, 98% confidence intervals were constructed, which correspond to a lower confidence limit with 99% confidence. Non-detect values were conservatively represented at the reported detection limit. Trend lines with confidence bands or means with confidence intervals are included in Attachment 5.

Table 3 is a graphical ("Stop-Light") presentation of the statistical findings that includes color-coded cells, as detailed herein. "Green" cells represent constituent/well pairs where no detected concentrations have ever exceeded their respective GWPS. "Yellow" cells represent constituent/well pairs where at least one detected concentration has exceeded its respective GWPS, but the lower confidence limit/confidence band was below the GWPS (not a statistically significant level above the GWPS). "Red" cells represent constituent/well pairs where at least

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

SPRING AND FALL 2023 MONITORING ACTIVITIES

January 18, 2024

one detected concentration exceeded the respective GWPS, and the lower confidence interval band was above the GWPS. "Red" cells represent SSLs above the GWPS.

The following table presents the CCR Rule Appendix IV constituents/well pairs SSLs above the GWPS based on Stantec's evaluation of 2023 quantitative analytical results collected as part of the CCR Rule monitoring plan. To date, no SSL exceedances have been identified for any constituent/well pair in the CB Landfill monitoring network.

CCR Rule Appendix IV SSLs above the GWPSs			
CCR Unit	Constituent/Well Pair	Lower Confidence Limit	GWPS
Bottom Ash Basin	Arsenic/BAC-2	0.0375 mg/l	0.0362 mg/l
	Arsenic/BAC-8	0.0539 mg/l	
	Arsenic/BAC-9	0.0427 mg/l	
	Arsenic/BAC-10	0.0531 mg/l	
	Arsenic/BAC-15	0.0428 mg/l	
	Arsenic/BAC-16	0.0781 mg/l	
	Molybdenum/BAC-2	0.1043 mg/L	0.100 mg/L
Waste Water Basin	Arsenic/WWC-1	0.0269 mg/l	0.0150 mg/L
	Arsenic/WWC-3	0.0176 mg/l	
	Arsenic/WWC-9	0.0183 mg/l	
	Arsenic/WWC-10	0.0164 mg/l	
Combustion By-products Landfill	No SSLs above GWPS		

As identified on occasion during past statistical analyses, Stantec's 2023 analysis indicates arsenic SSL exceedances of the respective GWPS at wells BAC-2, WWC-1, and WWC-2 and a molybdenum SSL exceedance at well BAC-2. Each monitoring well is located at the respective boundary of each CCR unit.

The 2023 (first-time) statistical analysis of wells BAC-8 through BAC-16 and WWC-9 through WWC-13 indicates arsenic SSLs in excess of the respective GWPS at wells BAC-8, BAC-9, BAC-10, BAC-15, BAC-16, WWC-9, and WWC-10. The constituent well pairs with LCL Appendix IV concentrations above the GWPS will be further evaluated to determine if concentrations are representative of natural, locally elevated arsenic concentrations in soil and groundwater or represent a release from a regulated CCR unit.

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

SPRING AND FALL 2023 MONITORING ACTIVITIES

January 18, 2024

It is well documented¹ that naturally-occurring arsenic can be present in soil and groundwater at elevated concentrations in basin-fill sediments and aquifers throughout the Basin and Range Physiographic Province of the western United States (including Lake Bonneville sediments similar to those underlying the IGF), attributable to volcanic rock source material and lacustrine and hot spring deposits. For reference, the IGF is located within a few miles of large volcanic topographic features, including Baker Hot Springs and the adjacent 9-mile by 6-mile Fumarole Butte/Crater Bench. Numerous United States Geological Survey (USGS) studies report that arsenic concentrations in drinking-water wells located within western U.S. basin-fill aquifers exceed the national arsenic MCL more than twice as frequently as in drinking-water wells nationwide.

Numerous additional publications² report that arsenic concentrations have been elevated in private wells located throughout Millard County, Utah, including areas north of Delta, Utah and in the vicinity of the IGF. In Millard County, weathering of volcanic rocks is the major source of arsenic in groundwater (Lewis 1998, Welch 1988). Studies by the US EPA (Southwick 1982, Lewis 1999) and the USGS (2009) have found high arsenic concentrations in groundwater throughout the vicinity of Delta, Utah.

Currently, and for the foreseeable future, the CCR constituent plumes downgradient of the two surface impoundments do not pose any unmitigated risk to human health, ecologic receptors, and/or the environment. As additional groundwater quality data is generated, CCR constituent concentrations will be evaluated through statistical analysis, in accordance with CCR Rule. Ongoing/future water quality data will be evaluated to determine whether additional monitoring and/or recovery wells might be warranted for appropriate CCR constituent-impacted groundwater control and remediation. If needed in the future, IPSC is prepared to add supplemental groundwater recovery and/or monitoring wells, if and where deemed warranted for ongoing protection to human health and the environment.

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

ONGOING CORRECTIVE ACTIONS AND EXPANDED GROUNDWATER CORRECTIVE ACTION REMEDY
January 18, 2024

3.0 ONGOING CORRECTIVE ACTIONS AND EXPANDED GROUNDWATER CORRECTIVE ACTION REMEDY

3.1 ONGOING GROUNDWATER RECOVERY AT EXISTING RECOVERY WELLS WR-101, WR-102, AND WR-103

IPSC intends to continue operation of existing groundwater recovery wells WR-101, WR-102, and WR-103. The three wells are recovering TDS-impacted groundwater from the generalized middle of the estimated TDS plume that is migrating southwest of the Bottom Ash Basin. Continued removal of TDS-impacted groundwater from each of these three wells is helping reduce the total mass of CCR constituents in the uppermost aquifer beneath areas of the site located downgradient of, and in close proximity to, the Bottom Ash Basin.

3.2 INSTALLATION AND STARTUP OF EXPANDED GROUNDWATER REMEDY

Final selection and design of the expanded groundwater corrective action remedy was documented in IPSC/Stantec's June 2021 *Selection of Remedy Report*. The report provided detailed analysis of the extent and nature of impacted groundwater associated with the surface impoundments, a summary of corrective measures assessment, and evaluation of the selected remedy in terms of short- and long-term effectiveness and appropriate protection to human health and the environment.

Groundwater quality data to date, including the 2023 results, indicate that TDS has migrated farther down-gradient of the two surface impoundments than other CCR constituents, including Appendix IV metals. As discussed in detail in IPSC's November 2020 *Demonstration of Requirements for Alternative Closure Deadline under 40 C.F.R. §257.103(f)(2) Report* and IPSC's November 2020 *Amended Assessment of Corrective Measures* report, IPSC and Stantec anticipate that recovery of TDS-impacted groundwater at select recovery wells will also intercept metal constituents that might be present, as TDS is expected to continue to migrate at a faster rate than dissolved metals in the clay-rich aquifer that underlies the property.

As detailed in IPSC's *Selection of Remedy Report*, Stantec provided engineering and design services to IPSC for enhanced TDS plume control and associated groundwater recovery. Design elements included, for instance:

- Final basis of design;
- Process flow diagram supported by a hydraulic pumping and conveyance model;
- Piping and instrumentation (P&ID) drawings;
- Typical recovery well completion detail.

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

ONGOING CORRECTIVE ACTIONS AND EXPANDED GROUNDWATER CORRECTIVE ACTION REMEDY
January 18, 2024

- Finalized hydraulic model of the pumping and conveyance system;
- Typical design details for the recovery wells and surface completions;
- Underground yard piping;
- Control philosophy for the system;
- Electrical single-line and termination drawings; and
- Equipment and construction specifications.

As specified in IPSC's *Selection of Remedy Report*, during 2022 and 2023 IPSC purchased and installed equipment, supplemental electrical capacity, and related infrastructure needed for the expansion of the groundwater remediation network at the IGF, including for instance:

- down-well submersible groundwater recovery pumps and water level controls,
- access for ongoing groundwater sampling and monitoring capabilities,
- protective wellhouses atop each recovery wellhead,
- below-grade, recovered groundwater conveyance piping and systems,
- supplemental electricity and telemetry capacity extended to each new recovery wellhouse, and
- other necessary equipment and appurtenances associated with the expanded groundwater recovery network.

Each recovery wellhead was interconnected via buried water conveyance piping to a buried trunkline that discharges groundwater recovered from wells WR-101, WR-102, and WR-103 to the 80-mil, HDPE-lined Ash Recycle Basin located immediately south of the Bottom Ash Basin. As detailed in IPSC's Groundwater Discharge Permit and identified on Figures 3 and 4, IPSC is currently constructing seven new evaporation basins immediately west of the existing Evaporation Ponds. Once operational, IPSC intends to use the new evaporation basin system rather than the Ash Recycle Basin for future evaporation of recovered groundwater as part of its CCR and Groundwater Discharge Permit compliance programs.

TDS concentrations and Stantec's groundwater flow and transport model were used to help identify which area-specific wells are used for groundwater recovery and TDS plume control purposes downgradient of both the Bottom Ash Basin and the Wastewater Basin. If needed in the future, IPSC is prepared to add supplemental groundwater recovery and/or monitoring wells, if and where deemed warranted for ongoing protection to human health and the environment.

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

ONGOING CORRECTIVE ACTIONS AND EXPANDED GROUNDWATER CORRECTIVE ACTION REMEDY
January 18, 2024

As of June 2023, IPSC initiated groundwater recovery at the following wells, based on analysis of historical water quality data observed and statistically analyzed through the Fall 2022 sampling event:

Bottom Ash Basin Plume Control:

- wells: RW-9, BAC-13, BAC-14, BAC-29, BAC-30, and BAC-31 (in addition to wells WR-101, WR-102, WR-103).

Waste Water Basin Plume Control:

- wells: WWC-1, WWC-4, WWC-5, RW-4, WWC-6, WWC-8, WWC-12, WWC-13, WWC-14, and WWC-15.

3.2.1 Preliminary Evaluation of Effectiveness of the Current, Existing Groundwater Recovery Program

Figures 3A/B and 4A/B herein present Stantec's modeling of inferred groundwater potentiometric surfaces beneath the IGF. Groundwater flows from higher potentiometric elevations toward lower elevations and the inferred flow direction is perpendicular to the potentiometric lines presented on the figures. As the potentiometric maps indicate, and which has been consistent since monitoring at the site began in the 1980s, the predominant flow direction of groundwater beneath much of the IGF is generally toward the southwest, with localized areas of more westerly flow.

As the 2023 water level data indicate, localized potentiometric elevations appear to be influenced by removal of groundwater from recovery wells. Static water levels within and in the vicinity of recovery wells are lower in mean sea level elevation than would be expected, if there were no groundwater pumping and removal from the subsurface. Typically, and as expected, the greatest declines in water table elevations are at the individual recovery wells, with varying degrees of radial influence extending in 360-degree directions around each recovery well. As groundwater is pumped and removed from the subsurface at each recovery well, the surrounding potentiometric surface of the water table declines in elevation in response to the reduced hydrostatic pressure attributable to the pumping well.

The radial extent to which groundwater is recovered/captured around individual recovery wells is influenced by well-specific pumping rate and area-specific aquifer hydrogeologic characteristics. As detailed in IPSC's June 2021 *Selection of Remedy Report*, groundwater recovery rates (yields and specific capacities) vary between the different pumping, recovery wells (generally between five to 15 gallons per minute-gpm) due to the heterogeneous nature of the lithologic and hydraulic characteristics underlying the IGF (highly-varied, interspersed clays, silts, and sands of varying thicknesses and interstitial clay matrices, etc.). Thus, the radial influence of groundwater recovery and induced depression in the potentiometric surface associated with each recovery well varies from well to well.

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

ONGOING CORRECTIVE ACTIONS AND EXPANDED GROUNDWATER CORRECTIVE ACTION REMEDY
January 18, 2024

Current pumping rates at most of the recovery wells vary between five to 15 gpm. Review of the 2023 potentiometric data presented on Figures 3, 4, and 5 indicate that groundwater recovery in the vicinity of the downgradient leading edges of the TDS plumes located southwest of the two surface impoundments (well clusters BAC-29, BAC-30, and BAC-31, as well as WWC-6, WWC-12, WWC-13, WWC-14, and WWC-15) indicates significant groundwater recovery and induced depressions in the potentiometric surface in the vicinity of the clustered recovery wells.

3.2.2 Proposed Expansion of Groundwater Recovery Network

In consideration of 2023 groundwater flow data and TDS analytical results, IPSC recently installed groundwater pumping and recovery equipment within the following wells, with intentions of interconnecting the wells to the existing groundwater recovery network, as soon as practicable:

Bottom Ash Basin Plume Control:

- well BAC-11 (most recent TDS concentration of 1,011 ppm is less than the IGF's Groundwater Protection Level of 1,100 ppm).

Waste Water Basin Plume Control:

- wells: WWC-16 and WWC-17.

Supplemental groundwater recovery at these specific wells is anticipated to result in enhanced TDS mass removal and plume control. Groundwater recovery at well BAC-11 is anticipated to supplement TDS mass removal associated with nearby upgradient, pumping wells RW-9, BAC-13, BAC-14, BAC-29, BAC-30, and BAC-31. Recovery of groundwater at wells WWC-16 and WWC-17 will supplement TDS mass removal associated with the other nearby WWC pumping wells.

Monitoring well WWC-9 only recently exhibited TDS concentration (1,100 ppm Spring 2023 and 1,170 ppm Fall 2023) at or in excess of IPSC's Groundwater Protection Level of 1,100 ppm. IPSC intends to prepare for possible use of well WWC-9 as a recovery well, depending on the analytical results associated with the forthcoming Spring 2024 sampling event.

If needed in the future for plume monitoring and/or control, IPSC is prepared to add supplemental groundwater monitoring and/or recovery wells, if and where deemed warranted for ongoing protection to human health and the environment. Ongoing review of groundwater quality and hydraulic data will be used to help investigate the need for any such supplemental monitoring and/or remedial measures.

As detailed in IPSC's November 2020 *Demonstration of Requirements for Alternative Closure Deadline under 40 C.F.R. §257.103(f)(2) Report*, and as is currently believed, the CCR constituent plumes pose no unmitigated risk to on- and off-site human health. Given the vast real property acreage (4,614-acres) that is owned by the owner of the IGF, Intermountain Power Agency (IPA), as well as the relatively significant distances to off-site potential receptors who might use groundwater for potable and/or non-potable uses (approximately 2.5-miles away), IPSC

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

ONGOING CORRECTIVE ACTIONS AND EXPANDED GROUNDWATER CORRECTIVE ACTION REMEDY

anticipates that it can implement supplemental plume control measures so as to mitigate any such future potential exposures in a prompt and timely manner.

Notes:

Except for Radium 226+228, all units micrograms per liter (mg/L), units for Radium 226+228 are picocuries per liter (pCi/L)

Table 2a
Summary Statistics - Bottom Ash Basin Surface Impoundment - 2015 -2023
Intermountain Power Service Corporation - Intermountain Generation Facility, Delta, Utah

CCR Constituent	Well ID	Frequency of Detection	Range of Reporting Limits	Minimum Detected Concentration	Maximum Detected Concentration	Mean Concentration	Standard Deviation	Median	95th Percentile
Statistical Analyses were only conducted on wells with a minimum of 8 sampling results. Additional wells will be incorporated as more data is collected									
The mean and standard deviation are represented by the Kaplan-Meier mean and standard deviation for constituent/well pairs with non-detects, reported "--": Not applicable									
Well ID BA-U-1 and BA-U-2 are upgradient of the Bottom Ash Basin and represent background conditions, all other wells are downgradient of the Bottom									

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

Notes:

Except for Radium 226+228, all units micrograms per liter (mg/L), units for Radium 226+228 are picocuries per liter (pCi/L)

Statistical Analyses were only conducted on wells with a minimum of 8 sampling results. Additional wells will be incorporated as more data is collected

The mean and standard deviation are represented by the Kaplan-Meier mean and standard deviation for constituent/well pairs with non-detects, reported

Notes:

Except for Radium 226+228, all units micrograms per liter (mg/L), units for Radium 226+228 are picocuries per liter (pCi/L)
The mean and standard deviation are represented by the Kaplan-Meier mean and standard deviation for constituent/well pairs with non-detects, reported
Statistical Analyses were only conducted on wells with a minimum of 8 sampling results. Additional wells will be incorporated as more data is collected

"--": Not applicable

Well ID CL-U-1, CL-U-2 and CL-U-3 are upgradient of the Combustion By-Products Landfill and represent background conditions, all other wells are downgradient of the

All units micrograms per liter (mg/L), except for Radium 226+228 which has units of picocuries per liter (pCi/L)

UTL: 95% Upper Tolerance Limit with 95% coverage

MCL: US EPA Maximum Contaminant Level

AS: US EPA Alternative Standards establish for cobalt, lead, lithium, & molybdenum as these constituents do not have an MCLs

GWPS: Groundwater protection standard is the greater of the site specific UTL or the MCL/AS.

LCL: Lower confidence limit of the mean

LCB: Lower confidence band around trend line

Green Shading indicates that no detected concentration in the constituent/well pair exceed the GWPS

Yellow Shading indicates that the at least one detected concentration in the constituent/well pair exceeded GWPS, but the LCL/LCB is below the GWPS (e.g. No Statistical Evidence of a statistical significant level (SSL) above the GWPS)

Red Shading indicates that the LCL exceeds the GWPS or the LCB exceeds the GWPS at the last round of sampling. Evidence of a statistically significant level above the GWPS for the constituent/well pair.

CLW-1

Interval (feet)	Drilling Method	Sample Description
		5/11/2015
0-3	10" Sonic	Brown fine grained Sand with gravel, dry
3-6	10" Sonic	Light to Dark Brown fine to medium grained Sand, no gravel present, dry
6-8	10" Sonic	Light Brown fine grained Sand
8-11.5	10" Sonic	Grayish white fine grained Sand, gravels present, rounded, dry
11.5-13.5	10" Sonic	Tan SILT with clay matrix, slightly moist
13.5-17	10" Sonic	Grayish Tan CLAY with small amount of silt present, slightly moist
17-23	10" Sonic	Grayish Tan SILT with fine grain sand present, trace amounts of clay, slightly moist
23-27	10" Sonic	Tannish Gray CLAY, denser, dry
27-32	10" Sonic	Tan CLAY, slightly moist
32-35	10" Sonic	Tan CLAY, denser material, slightly moist
		5/12/2015
35-48	10" Sonic to 40 feet	Tannish gray CLAY, moist
48-51	8" Sonic	Tannish gray CLAY, moist, softer
51-52	8" Sonic	Orangish, Brown, black fine grained Sand, moist
52-54	8" Sonic	Orangish, Brown , Red CLAY, slightly moist
54-56	8" Sonic	Orangish Brown CLAY with a fine grained sand matrix, slightly moist
56-62	8" Sonic	Light Brown fine grained Sand, saturated
62-63	8" Sonic	Light Brown CLAY, slightly moist
63-63.5	8" Sonic	Fine to medium grained Sand, slightly moist
63.5-64	8" Sonic	Light Brown CLAY, dry to slightly moist
64-65	8" Sonic	Light Brown fine grained Sand with clay matrix, moist

75-77	8" Sonic	SP	Sand, saturated

TD = 77; screen 67-77; sand 62-7; plug 57-62; grout to surface; centralizers 66.5 and 76.5

Drilling Method: Sonic

Drilling Company - Cascade Drilling

Driller - David Donnely

Geologist - Tom Fendler

Flush-mount, Wellhead Protective Vault, 8-inch diameter, steel lid

Ground Surface

Concrete Apron

Borehole:
8-inch diameter,
from 0 to 77-feet bgs

4-inch diameter, Sch. 40 PVC,
from ~ 0.25 - 67 feet bgs

Cement-Bentonite (~ 10:1) Grout,
Tremie-Pipe Slurry,
from 0 to 57-feet bgs

Bentonite medium chips, from 57
to 62 feet bgs

At Time of Drilling, Depth to
Uppermost Ground Water ~ 65 to 70-
feet bgs

Centralizers placed ~ the bottom
and the top of the well screen.

Sand Filter Pack:
(16/30 washed silica sand,
2-feet above screen
from 62 to 77 feet bgs)

10-foot length; 4-inch diameter
Sch. 40 PVC, 0.020"-slotted,
from 67 to 77 feet bgs

Total Depth (TD) = 77 feet bgs

TD = 70'; PVC 4-inch screen from 57 to 67; PVC 4-inch riser from -2.5 to 57

Drilling Method: Guspech GS24-300RS, 8" Rotasonic

Drilling Company - Cascade Drilling

Driller - Daniel Dodge

Geologist - Michael Sauerwein

Above-grade, 5-feet. long, 8-in. dia., steel
Wellhead Protective Monument set in a 2X2
Concrete Pad ~ 2.5-feet. stick-up

Ground Surface

8-inch diameter,
from 0 to 70-feet bgs

4-inch diameter, Sch. 40 PVC,
from ~ 2.0 feet above ground surface (ags)
to 57 feet below ground surface (bgs)

Cement-Bentonite gel (~ 10:1) Grout,
Tremie-Pipe Slurry,
from 0 to 50-feet bgs

Bentonite medium chips, from 50
to 55 feet bgs

At Time of Drilling,
Depth to Uppermost Ground Water
~ 57.5-feet bgs

Centralizers placed ~ the bottom
and the top of the well screen.

16/30 washed silica sand,
2-feet above screen
from 55 to 70 feet bgs

10-foot length; 4-inch diameter
Sch. 40 PVC, 0.020"-slotted,
from 57 to 67 feet bgs

Total Depth (TD) = 70 feet bgs

Completion Date: 2019-04-29

Driller: Ryan Miller

Logged by: Rich Pratt

Depth to Water at Drilling: 67 feet

Depth to Water at Drilling (static at 24 hours):
45.59 feet

BAC-8

Interval (feet)	Description
0 - 1	Light brown fine-grained sand with clay, dry
1 - 13	Light brown clay with silt, dry
13 - 17	Light brown fine-grained sand with clay, dry
17 - 18	Light brown clay with sand, moist
18 - 19	Medium brown sand, saturated
19 - 21	Light brown clay with sand, moist
21 - 27	Light brown clay with sand, dry
27 - 28	Brown with red clay, moist
28 - 31	Brown clay, moist
31 - 34	Gray clay, moist
34 - 43	Brown clay, moist
43 - 56	Medium brown medium-grained sand, moist
56 - 56.5	Medium brown medium-grained sand with pebbles, moist
56.5 - 57	Medium brown medium-grained sand, moist
57 - 63	Brown clay, moist
63 - 65	Medium brown fine-grained sand, moist
65 - 66.5	Brown clay, moist
66.5 - 67	Medium brown fine-grained sand, moist
67 - 68	Medium brown fine-grained sand, saturated
68 - 69.5	Medium brown fine-grained sand
69.5 - 77	Red and brown clay

Well Completion materials and Depth Intervals (feet) Below Ground Surface

Surface Completion: Stick-up

Casing, solid (6-inch PVC): 0-52.62 feet

Screen (6 inch, 0.02 slotted, PVC): 52.62-77.62 feet

Sand Pack: 16/30 sand, 47.62-77.62 feet

Bentonite Seal: Hydrolyzed bentonite pellet seal
40.62-47.62 feet

Top of 6 in. PVC Casing Elevation (Relative Datum Survey): NA

Top of Manhole Cover (Relative Datum Survey):
NA

Top of PVC casing above ground surface ~ 2.38 feet. stick-up

Above-grade, 5-feet. long, 8-in. square, steel Wellhead Protective Monument ~ 3.25 feet. stick-up

Ground Surface

6-inch Diameter, Sch 40 PVC Well Casing from below top of casing - 80 feet

Cement-Bentonite (~ 10:1) Grout, Tremie-Pipe Slurry from 0 to 40.62 feet below ground surface (bgs)

10-inch boring from 0 to 77.62-feet bgs

Medium bentonite chips From 40.62 to 47.62 feet bgs

Sand Filter Pack (16/30 washed, silica sand, 5 feet above screen from 47.62 to 77.62 feet bgs)

At Time of Drilling, Depth to Uppermost Ground Water ~ 67 feet bgs

Centralizers - placed at the bottom and at 25-30 foot intervals

25-feet; 6-inch 0.020-slotted, PVC well screen from 52.62 to 77.62 feet bgs

TD = 55'; PVC 4-inch screen from 45 to 55; PVC 4-inch riser from -2.5 to 45
Drilling Method: Guspech GS24-300RS, 8" Rotasonic

Drilling Company - Cascade Drilling
Driller - Daniel Dodge
Geologist - Michael Sauerwein

Above-grade, 5-feet. long, 8-in. dia., steel
Wellhead Protective Monument set in a 2X2
Concrete Pad ~ 2.5-feet. stick-up

Ground Surface

8-inch diameter,
from 0 to 55-feet bgs

4-inch diameter, Sch. 40 PVC,
from ~ 2.0 feet above ground surface (ags)
to 45 feet below ground surface (bgs)

Portland Cement-Bentonite gel (~ 10:1)
Grout, Tremie-Pipe Slurry,
from 0 to 38-feet bgs

Bentonite medium chips,
from 38 to 43 feet bgs

At Time of Drilling,
Depth to Uppermost Ground Water
~ 46.25-feet bgs

Centralizers placed ~ the bottom
and the top of the well screen.

16/30 washed silica sand,
2-feet above screen
from 43 to 55 feet bgs

10-foot length; 4-inch diameter
Sch. 40 PVC, 0.020"-slotted,
from 45 to 55 feet bgs

Total Depth (TD) = 55 feet bgs

Well Completion materials and Depth Intervals (feet) Below Ground Surface

Surface Completion: Stick-up

Casing, solid (6-inch PVC): 0-62.75 feet

Screen (6 inch, 0.02 slotted, PVC): 62.75-87.75 feet

Sand Pack: 16/30 sand, 57.75-87.75 feet

Bentonite Seal: Hydrolyzed bentonite pellet seal
50.75-57.75 feet

Top of 6 in. PVC Casing Elevation (Relative Datum Survey): NA

Top of Manhole Cover (Relative Datum Survey):
NA

Top of PVC casing above ground surface ~ 2.35 feet. stick-up

Above-grade, 5-feet. long, 8-in. square, steel Wellhead Protective Monument ~ 3.17 feet. stick-up

Ground Surface

6-inch Diameter, Sch 40 PVC Well Casing from below top of casing - 90.1 feet

Cement-Bentonite (~ 10:1) Grout, Tremie-Pipe Slurry from 0 to 50.75 feet below ground surface (bgs)

10-inch boring from 0 to 87.75-feet bgs

Medium bentonite chips From 50.75 to 57.75 feet bgs

Sand Filter Pack (16/30 washed, silica sand, 5 feet above screen from 57.75 to 87.75 feet bgs)

At Time of Drilling, Depth to Uppermost Ground Water ~ 67 feet bgs

Centralizers - placed at the bottom and at 25-30 foot intervals

25-feet; 6-inch 0.020-slotted, PVC well screen from 62.75 to 87.75 feet bgs

Total Depth (TD) = 87.75 feet bgs

47 - 52	SDM	Brown Fine to medium grained SAND, saturated
52 - 55	SDM	Red CLAY, dry
		Total Depth = 55 feet BGS, Screened from 35 – 55', Sand 32-55', Bentonite 29-32, Grout 0-29'

Well Completion Materials and Depth Intervals (ft.)

Surface Completion: Stick-up

Casing, solid: 6 inch diameter sch. 80 PVC casing, 0-6.5 ft.

Casing, solid: 6 inch diameter sch. 40 PVC casing, 6.5 -35 ft.

Screen: 6 inch diameter sch. 40 PVC well screen 0.025-slotted, 35-55 ft.

Sand Pack: 16/30 washed, silica sand, 32-55 ft.

Bentonite Seal: "Pure Gold" Bentonite Pellets, 29-32 ft.

Cement-Bentonite (10:1 ratio) Grout: 0-29 ft.

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

January 18, 2024

ATTACHMENT 3 BOX PLOTS

Box Plots - CCR Appendix IV Parameters

Bottom Ash Basin

Intermountain Power Service Corporation - Intermountain Generation Facility

Delta, Utah

Chromium - Box Plots
Intermountain Power - Bottom Ash Basin

Fluoride - Box Plots
Intermountain Power - Bottom Ash Basin

Lead - Box Plots
Intermountain Power - Bottom Ash Basin

Lithium - Box Plots
Intermountain Power - Bottom Ash Basin

Mercury - Box Plots
Intermountain Power - Bottom Ash Basin

Molybdenum - Box Plots
Intermountain Power - Bottom Ash Basin

Radium226228 - Box Plots
Intermountain Power - Bottom Ash Basin

Selenium - Box Plots
Intermountain Power - Bottom Ash Basin

Thallium - Box Plots
Intermountain Power - Bottom Ash Basin

Intentionally Left Blank

Box Plots - CCR Appendix IV Parameters
Waste Water Basin
Intermountain Power Service Corporation - Intermountain Generation Facility
Delta, Utah

Chromium - Box Plots
Intermountain Power - Waste Water Basin

Fluoride - Box Plots
Intermountain Power - Waste Water Basin

Lead - Box Plots
Intermountain Power - Waste Water Basin

Lithium - Box Plots
Intermountain Power - Waste Water Basin

Mercury - Box Plots
Intermountain Power - Waste Water Basin

Molybdenum - Box Plots
Intermountain Power - Waste Water Basin

Radium226228 - Box Plots
Intermountain Power - Waste Water Basin

Selenium - Box Plots
Intermountain Power - Waste Water Basin

Thallium - Box Plots
Intermountain Power - Waste Water Basin

Intentionally Left Blank

Box Plots - CCR Appendix IV Parameters
Combustion By-Products Landfill
Intermountain Power Service Corporation - Intermountain Generation Facility
Delta, Utah

Chromium - Box Plots

Intermountain Power - Combustion By-Products Landfill

Fluoride - Box Plots

Intermountain Power - Combustion By-Products Landfill

Lead - Box Plots

Intermountain Power - Combustion By-Products Landfill

Lithium - Box Plots

Intermountain Power - Combustion By-Products Landfill

Mercury - Box Plots

Intermountain Power - Combustion By-Products Landfill

Molybdenum - Box Plots

Intermountain Power - Combustion By-Products Landfill

Intentionally Left Blank

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

January 18, 2024

ATTACHMENT 4 TIME SERIES PLOTS

Time Series Plots

Bottom Ash Basin

Intermountain Power Service Corporation - Intermountain Generation Facility, Delta, Utah

Fluoride - Time Series
Intermountain Power Service Corporation - Intermountain Generation Facility

Lead - Time Series
Intermountain Power Service Corporation - Intermountain Generation Facility

Lithium - Time Series
Intermountain Power Service Corporation - Intermountain Generation Facility

Mercury - Time Series
Intermountain Power Service Corporation - Intermountain Generation Facility

Molybdenum - Time Series
Intermountain Power Service Corporation - Intermountain Generation Facility

Radium 226+228 - Time Series
Intermountain Power Service Corporation - Intermountain Generation Facility

Selenium - Time Series
Intermountain Power Service Corporation - Intermountain Generation Facility

Bottom Ash Basin

GWPS - Groundwater Protection Standard
Hollow symbols represent non-detects reported at the Method Detection Limit (MDL)

Thallium - Time Series
Intermountain Power Service Corporation - Intermountain Generation Facility

Bottom Ash Basin

GWPS - Groundwater Protection Standard
Hollow symbols represent non-detects reported at the Method Detection Limit (MDL)

Time Series Plots
Waste Water Basin
Intermountain Power Service Corporation - Intermountain Generation Facility, Delta, Utah

Fluoride - Time Series

Intermountain Power Service Corporation - Intermountain Generation Facility

Lead - Time Series

Intermountain Power Service Corporation - Intermountain Generation Facility

Lithium - Time Series

Intermountain Power Service Corporation - Intermountain Generation Facility

Mercury - Time Series

Intermountain Power Service Corporation - Intermountain Generation Facility

Molybdenum - Time Series

Intermountain Power Service Corporation - Intermountain Generation Facility

Radium 226+228 - Time Series

Intermountain Power Service Corporation - Intermountain Generation Facility

Selenium - Time Series Intermountain Power Service Corporation - Intermountain Generation Facility Waste Water Basin

Thallium - Time Series Intermountain Power Service Corporation - Intermountain Generation Facility Waste Water Basin

Time Series Plots
Combustion By-Product Landfill
Intermountain Power Service Corporation - Intermountain Generation Facility, Delta, Utah

Fluoride - Time Series Intermountain Power Service Corporation - Intermountain Generation Facility

Combustion By-Products Landfill

GWPS - Groundwater Protection Standard
Hollow symbols represent non-detects reported at the Method Detection Limit (MDL)

Lead - Time Series Intermountain Power Service Corporation - Intermountain Generation Facility

Combustion By-Products Landfill

GWPS - Groundwater Protection Standard
Hollow symbols represent non-detects reported at the Method Detection Limit (MDL)

Lithium - Time Series Intermountain Power Service Corporation - Intermountain Generation Facility

Combustion By-Products Landfill

GWPS - Groundwater Protection Standard
Hollow symbols represent non-detects reported at the Method Detection Limit (MDL)

Mercury - Time Series Intermountain Power Service Corporation - Intermountain Generation Facility

Combustion By-Products Landfill

GWPS - Groundwater Protection Standard
Hollow symbols represent non-detects reported at the Method Detection Limit (MDL)

Molybdenum - Time Series Intermountain Power Service Corporation - Intermountain Generation Facility

Combustion By-Products Landfill

GWPS - Groundwater Protection Standard
Hollow symbols represent non-detects reported at the Method Detection Limit (MDL)

Radium 226+228 - Time Series Intermountain Power Service Corporation - Intermountain Generation Facility

Combustion By-Products Landfill

GWPS - Groundwater Protection Standard
Hollow symbols represent non-detects reported at the Method Detection Limit (MDL)

2023 ANNUAL GROUNDWATER MONITORING AND CORRECTIVE ACTION SUMMARY REPORT

January 18, 2024

ATTACHMENT 5 REGRESSIONAL AND CONFIDENCE INTERVAL/BAND PLOTS

Regression and Confidence Interval/Band Plots

Bottom Ash Basin

Intermountain Power Service Corporation - Intermountain Generation Facility, Delta, Utah

Arsenic - Time Series and Confidence Band

Intermountain Power Service Corporation - Intermountain Generation Facility
Bottom Ash Basin

BAC-9

Arsenic - Time Series and Confidence Interval

Intermountain Power Service Corporation - Intermountain Generation Facility
Bottom Ash Basin

BAC-10

Arsenic - Time Series and Confidence Interval

Intermountain Power Service Corporation - Intermountain Generation Facility
Bottom Ash Basin

BAC-11

Arsenic - Time Series and Confidence Interval

Intermountain Power Service Corporation - Intermountain Generation Facility
Bottom Ash Basin
